

Dealer Advisory

Negative Battery Cable Disconnect

Advisory Type	Informational
Affected Units	All crated mowers after 6/30/23.
Situation	Mowers that are waiting to be sold with batteries connected will have a low voltage draw causing the battery to slowly drain down.
Factory Action	The removal of the negative cable is now being implemented for mowers being crated from the factory to help reduce the chance of a battery voltage draw.
Dealer Action	Dealers will need to reconnect the negative cable to the negative battery post when doing the setup/pre-delivery checklist.

Follow reasonable and customary safety precautions. Wear appropriate PPE for this procedure.
